DETAILED ACTION

Drawings

The drawings are objected to because the cross hatching shows the wrong 1. kind of material. See chapter 6 in the MPEP. Basically, metal should have crosshatching with uniform thickness lines while an insulator should be alternating thick and thin lines. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any

Art Unit: 2839

required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The abstract of the disclosure is objected to because it is an exact duplicate of claim 1. Correction is required. See MPEP § 608.01(b).

Claim Objections

3. Claim 7 objected to because of the following informalities: In line 3 the recitation that the PCB is rectangular was already recited in claim 1 line 5.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2839

5. Claims 1-3, 6 and, 8 rejected under 35 U.S.C. 102(e) as being clearly anticipated by Howard et al.

Howard discloses (device for controlling a vehicle is intended use and not given patentable weight): a housing (12); a rectangular printed circuit board (30) fixed to the inside of said housing (fig. 1) and having a control circuit thereon; and plugs (52) provided along one side of the rectangular printed circuit board (fig. 5) to transfer signals between the inside and the outside of said housing (fig. 1); wherein said plugs respectively contain plug pins (unnumbered fig. 6) and the plug pins are electrically connected to said printed circuit board via bonding wires (56 e.g. fig. 5) inside said housing.

Regarding claim 2 Howard discloses that the printed circuit board is rectangular and said plugs are arranged on said printed circuit board along the longitudinal side thereof (fig. 1).

Regarding claim 3 Howard discloses that the bonding wires are members of a flex cable (fig. 7).

Regarding claim 6 Howard discloses that the printed circuit board has a control circuit made up with modules, which perform preset functions (col. 4 line 42+).

Application/Control Number: 10/628,352 Page 5

Art Unit: 2839

Claim Rejections - 35 USC § 103

- 6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary.

 Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claim 4 rejected under 35 U.S.C. 103(a) as being unpatentable over Howard et al as applied to claim 1 above, and further in view of Kerner et al.

and vehicle control.

Howard does not disclose that the plugs transfer signals related to engine control

Page 6

Admitted art Kerner et al discloses plugs (6) for signals that control a vehicle and its engine (abstract 1st sentence).

At the time the invention was made it would have been obvious to one of ordinary skill in the art to modify the enclosure assembly of Howard with the control plugs of Kerner et al. The motivation for this change would have been to provide more functionality for the box of Howard besides distribution. Howard is very general about describing specific uses for his enclosure leaving open a possibility of vehicle and motor control signaling.

Allowable Subject Matter

- 9. Claims 5, 7 and, 9-15 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 10. The following is a statement of reasons for the indication of allowable subject matter: A grounding pin on an inner wall of the housing and between the plugs, this ground is connected to the PCB via a bonding wire. The first through third modules on the PCB. The multi layered PCB.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Zarroli whose telephone number is 571-272-2101. The examiner can normally be reached on 7:30 to 3:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, T.C. Patel can be reached on (571) 272-2800 ext 39. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pairdirect.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
